Product Description: Toyopearl is a methacrylic polymer incorporating high mechanical and chemical stability. Resins are available as non-functionalised “HW” series resins for size exclusion separations, and derivatised with surface chemistries for alternative modes of chromatography such as ion exchange, hydrophobic interaction or affinity separations.

Toyopearl PPG-600M chromatographic resin is designed for hydrophobic interaction chromatography. This chromatographic mode separates molecules on the basis of hydrophobic interactions between the sample and the resin. The separation is usually accomplished in buffered aqueous solution with a gradient of decreasing ionic strength. Toyopearl PPG-600M incorporates a higher binding capacity for antibodies and a high recovery.

Formulation: Particulate resin (spherical), available in particle sizes (mean diameter):
65 µm = “M” grade
Supplied as slurry in 20 % ethanol (v/v).
